Fire/EMS organizations work in a demanding, fast-paced environment. Having timely access to quality information is crucial to successful performance. HealthEMS Fire is a comprehensive, cloud-based NFIRS-5-compatible Record Management System (RMS) you can use to document incidents and effectively manage your fire department.

**One solution for Fire and EMS.**

Today’s fire departments commonly perform both EMS and fire duties. HealthEMS Fire extends the capabilities of the HealthEMS Manager, so you can seamlessly manage fire incidents alongside ePCRs in one software system. A single system provides centralized records management, improved consistency and increased productivity.

**Fast. Accurate. Easy.**

Using a single system reduces inefficiencies and simplifies workflow. Now, you can manage incidents and patients in one record set, making record keeping more efficient. Plus, fields auto-populate with information from Computer Aided Dispatch (CAD) files improving accuracy right from the start. ePCRs are intelligently matched to fire incidents, and validated, type-ahead dropdown lists make documentation faster, easier and more complete.

**Inspections and investigations.**

Routine inspections and fire investigations can be performed electronically, saving time, giving you the power to more effectively manage these critical tasks. Flexible role-based security even offers separate password-protected roles for Fire Investigators.

**Advanced management and reporting.**

With complete electronic documentation, you gain the ability to conduct rich and timely reporting, which leads to better management and decision-making. You’ll have access to all your NFIRS data and more so you can measure performance and demonstrate the value of your important services to the communities you serve.
At Physio-Control, we know Fire/EMS.

You can depend on our over 60 years of experience serving the industry with the quality and reliability you’ve come to expect. You need solutions that work right, work fast and work under pressure, just like you do. The HealthEMS system supports the varied needs of Fire/EMS systems with effective integration and data flow management. Our professional services team has successfully implemented solutions for the largest, most complex Fire/EMS organizations in the world.

The HealthEMS system connects with all touchpoints in the Physio-Control System of Care including CODE-STAT™ Data Review Software, LIFENET® System and LIFEPAK® monitor/defibrillators.

HealthEMS® Patient Management System

This comprehensive, cloud-based solution is proven to help Fire/EMS organizations improve clinical, operational, financial and regulatory performance. Five components simplify management of all Fire/EMS tasks.

- **MobileTouch**
  Touch-based, point-of-care documentation tool.

- **Manager**
  Cloud-based, dashboard-driven data management and quality assurance.

- **Fire**
  NFIRS 5-compatible Record Management System (RMS).

- **Connectx**
  Secure data sharing that facilitates collaboration with hospitals and other providers.

- **RevNet**
  Quick, compliant claims production and efficient revenue cycle management.
