

You walk into a room—and someone you know is unconscious on the floor.

This is the AED you want at your side.

Sudden cardiac arrest (SCA) can happen anytime, anywhere. And if you're first on the scene, you want to be able to respond without delay—even if you've never helped in an emergency before.

The LIFEPAK CR® Plus AED will guide you through. It's the Automated External Defibrillator (AED) rated easiest to use, even for people with minimal training.¹ In a 2016 study, participants who used the LIFEPAK CR Plus AED were able to deliver a first shock almost 9 seconds faster than users of the Philips® HeartStart Onsite and 19 seconds faster than the ZOLL® AED Plus®. The LIFEPAK CR Plus AED helps you act swiftly and confidently as you work to save a life.

LIFEPAK CR® Plus AED: Tested and proven easiest to use.

We tested the Physio-Control LIFEPAK CR Plus AED against leading competitive devices from ZOLL and Philips in this real-life scenario: Participants arrived in a room with a training manikin on the floor. They were advised to treat the “patient” as quickly and effectively as possible with the AED and CPR. They received no additional guidance.

Users of the LIFEPAK CR Plus AED had the fastest times¹ to:

- ▶ **Place both pads**
LIFEPAK CR Plus AED users completed pad application in under 68 seconds.
- ▶ **First shock: 93 seconds**
Almost 9 seconds faster than users of the Philips HeartStart OnSite and 19 seconds faster than the ZOLL AED Plus.
- ▶ **Start CPR after first shock: 102 seconds**
29 seconds faster than Philips HeartStart Onsite AED and almost 16 seconds faster than ZOLL AED Plus.
- ▶ **Also, rated easiest to use on average**

Let's help save more lives.

In a stressful situation, clear guidance and simplicity can make all the difference. With a two-step operation and clear prompts, the LIFEPAK CR Plus AED helps even minimally trained users deliver lifesaving assistance quickly and with confidence. Why would you choose anything else?

REFERENCE

¹ Physio-Control Internal Semi-Automatic AED Comparison Usability Study, August 2016. Reported results are median data unless otherwise noted.

LIFEPAK AEDs require a prescription in the U.S. Please consult your physician.

AED users should be trained in CPR and in the use of the AED. Although not everyone can be saved, studies show that early defibrillation can dramatically improve survival rates.

All claims valid as of August 2016.
